We claim:

1. A data structure for allowing manipulation of pages as objects for exchange between said client and server comprising:

an page object control for storing a list of at least one of a method and a property on a first page;

at least one method on said first page,

wherein a second page retrieves said page object control and uses said list in order to support script in said second page which treats said first page as an object.

2. The data structure according to claim 1, wherein at least one of said method and said property includes values settable by a developer.

3. A method for creating a first page that treats a second page as an object comprising the steps of:

editing said first page;

referencing said second page in said first page as an object usable in said first page;

storing said first page.

4. The method according to claim 3, further comprising the step of:

creating the second page including adding a page object control to said second page, said page object control specifying at least one method or property stored on said second page.

5. The method according to claim 3, further comprising the step of:

creating the second page including adding a page object control to said second page, said page object control specifying at least one method or property related to said second page.

6. The method according to claim 4, further comprising the step of modifying the page object control.

7. The method according to claim 5, further comprising the step of modifying the page object control.
